FEATURES

Smart-Triggers
Smart-Triggers redefine the way our users can monitor the blockchain state in real-time using our own ParsiQL programming language.

24/7 crypto alarm
Configurable notifications and programmable actions allow users to timely react to any type of events on the blockchain.

Continuous audit
Continuous audit helps blockchains to follow regulatory compliance and business integrity which is necessary for blockchain mass adoption.

Retrospective analysis
PARSIQ allows users to replay any part of the blockchain in order to gather information about its state at any point of time in the past.

Infrastructure geographical distribution
Our technologically advanced infrastructure is spread around various parts of the world in order to achieve the minimum delay in synchronization with any blockchain.

Real-time feature extraction
During the process of blockchain monitoring specific features are gathered and aggregated for further analysis, analytics and pattern formation.
